Appln. No.: 10/648,061

Amendment Dated: January 5, 2005 Reply to Office Action of October 19, 2004

## **Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application.

(Currently Amended) A high frequency laminated device comprising:
a laminated body including

a first magnetic sheet having a relative permeability larger than 1,

a second <u>magnetic</u> sheet having a relative permeability larger than 1 [[on]]over a first surface of said first sheet, and

a third sheet under said first sheet;

a first inductor pattern for forming a first inductor and provided between said first and second sheets; and

first and second capacitor patterns forming a capacitor and situated between said first sheet and said third sheet.

- 2. (Currently Amended) The high frequency laminated device of claim 1, wherein said third sheet comprises at least one of a dielectric sheet and a magnetic sheet.
- 3. (Previously Presented) The high frequency laminated device of claim 2, wherein said first and third sheets are stacked and sintered after said first capacitor pattern is printed.
- 4. (Original) The high frequency laminated device of claim 1, further comprising a viaconductor formed in said first sheet, for electrically connecting said first inductor pattern and said first capacitor pattern.

Appln. No.: 10/648,061 MAT-8445US

Amendment Dated: January 5, 2005 Reply to Office Action of October 19, 2004

5. (Original) The high frequency laminated device of claim 1, further comprising a circuit element mounted on a surface of said laminated body and connected to at least one of said first inductor and said capacitor.

6. (Original) The high frequency laminated device of claim 1, further comprising a second inductor pattern forming a second inductor provided between said first and second sheets.
